

HDFC BANK

5-Year Financial & Banking Performance Analysis

FY2020-21 to FY2024-25

MANAGEMENT ANALYTICS REPORT

Prepared using	Excel • SQL / MySQL • Python • Power BI
Analysis focus	Financial Performance • Banking Growth • Asset Quality • Efficiency • Capital • Cash Flow • Ad-Hoc Analysis
Prepared by	Gokul G
Project year	2026

1. Executive Management Summary

Five-year performance snapshot and management implications

₹70,792.25 Cr	22.12%	₹26.20 Lakh Cr	₹27.15 Lakh Cr
FY2024-25 Net Profit	Net Profit CAGR	FY2024-25 Advances	FY2024-25 Deposits

Profitability

Net profit rose from ₹31,833.21 Cr to ₹70,792.25 Cr; FY2023-24 delivered the strongest annual growth at 39.27%.

Business growth

Advances increased 131.24% versus 103.34% for deposits, creating a 27.90 percentage-point growth gap.

Margins & returns

NIM declined from 4.10% to 3.48%; ROE moderated from its FY2022-23 peak of 17.39% to 14.56%.

Asset quality

GNPA and Net NPA improved through FY2022-23, then increased to 1.33% and 0.43% in FY2024-25.

Efficiency

Cost-to-Income Ratio increased from 36.30% to 40.50%, requiring continued productivity and cost focus.

Capital

CAR remained comparatively strong at 18.79%-19.60% across the period.

2. Project Scope, Data & Preparation

Source structure, data-quality controls and analytical workflow

Scope

- FY2020-21 to FY2024-25.
- Financial performance, banking growth, asset quality, efficiency, returns, capital, cash flow and ad-hoc analysis.

Source materials

- HDFC Bank annual reports and financial results.
- Screener financial dataset used for the working financial-statement dataset.

Important basis note

- The working financial-statement dataset is consolidated, while several banking KPIs are standalone/banking-level.
- HDFC Ltd merged with HDFC Bank effective July 1, 2023; this affects interpretation of FY2023-24 scale changes.

Data preparation

- Standardize year labels, units and fieldnames.
- Clean non-numeric markers; retain unavailable values as NULL rather than zero.
- Validate reconciliations, duplicates and chronology.

Analytical workflow

Source data → Excel → MySQL / SQL analysis → Python analytical validation → final analytical dataset → Power BI

Interpretation principle Observed relationships are not automatically treated as causal relationships. The HDFC Ltd merger and differences between consolidated financial statements and banking-level KPIs must be considered when interpreting changes.

3. Analytical Methodology

How the project turns raw financial data into management insight

Tool / Stage	Role in the project
Excel	Initial data organization, cleaning, standardization and validation.
SQL / MySQL	Relational structure and financial, banking, risk, efficiency, cash-flow and data-quality analysis.
Python	Pandas, NumPy and Matplotlib for inspection, merging, calculations, validation, ad-hoc analysis and visualizations.
Power BI	Six-page management dashboard built from the validated analytical dataset.

Core analytical questions

- How has profitability evolved, and which year recorded the strongest profit growth?
- Have advances and deposits grown at a balanced pace?
- How has asset quality changed during business expansion?
- Are margins, efficiency and returns strengthening or weakening?
- How has CASA composition changed?
- Has capital strength remained adequate?
- How do profitability and operating cash generation compare?

Management lens

Growth is assessed together with funding quality, asset quality, margin, efficiency, capital and cash generation rather than as a single headline metric.

4. Power BI Dashboard — Executive Overview

Five-year overview of net profit, advances, deposits, credit-deposit ratio, asset quality and CASA.

What this page answers

Where the bank stands after five years across profitability, balance-sheet growth, funding mix and asset-quality indicators.

5. Power BI Dashboard — Revenue & Profitability

Income, operating profit, net profit growth, net profit margin and NIM.

What this page answers

Whether absolute earnings growth is accompanied by healthy margin performance.

6. Power BI Dashboard — Banking Business Growth

Advances, deposits, growth trends, PCR

What this page answers

Whether lending expansion is being matched by deposit mobilization and capital support.

7. Power BI Dashboard — Asset Quality & Risk

GNPA, Net NPA, NPA spread and provision

What this page answers

How credit quality and provisioning changed as the balance sheet expanded.

8. Power BI Dashboard — Efficiency, Returns &Capital

ROA, ROE, Cost-to-Income Ratio and capital strength.

What this page answers

Whether growth is translating into sustainable returns and operating efficiency.

9. Power BI Dashboard — Cash Flow & Ad-Hoc Analysis

Operating, investing, financing and net cash flow with management-oriented comparisons.

What this page answers

How cash generation differs from accounting profit and how financing flows affect the net cash outcome.

10. Financial Performance Analysis

Profit growth, income composition and margin context

Financial Year	Net Profit	YoY Growth
FY2020-21	₹31,833.21 Cr	—
FY2021-22	₹38,052.75 Cr	19.54%
FY2022-23	₹45,997.11 Cr	20.88%
FY2023-24	₹64,062.04 Cr	39.27%
FY2024-25	₹70,792.25 Cr	10.51%

Five-year result

Net profit increased by approximately 122.38% from FY2020-21 to FY2024-25, with a 22.12% CAGR. FY2023-24 recorded the strongest annual increase.

Metric	FY2020-21	FY2024-25	Management context
Income	₹1,28,552.40 Cr	₹3,36,367.43 Cr	FY2023-24 working income measure increased 66.12%.
Operating profit	₹76,095.87 Cr	₹1,49,392.98 Cr	Strong absolute expansion.
Expenses	₹52,456.53 Cr	₹1,86,974.45 Cr	Expense-to-sales ratio was 40.81%, 41.61%, 36.92%, 61.41%, 55.59%.
Other income	₹27,332.88 Cr	₹1,34,548.50 Cr	FY2023-24 other income increased 266.67%.
Net profit margin	24.76%	21.05%	Margin varied across the five years.

The FY2023-24 increase in income and other income should be interpreted in light of the HDFC Ltd merger. The observed increase in other income is not, by itself, evidence of causation for profit growth.

11. Banking Business Growth & KPI Analysis

Advances, deposits, funding mix, provisioning and capital

Financial Year	Advances	Deposits	Credit-Deposit Ratio
FY2020-21	₹11,32,837 Cr	₹13,35,060 Cr	84.85%
FY2021-22	₹13,68,821 Cr	₹15,59,217 Cr	87.79%
FY2022-23	₹16,00,586 Cr	₹18,83,395 Cr	84.98%
FY2023-24	₹24,84,862 Cr	₹23,79,786 Cr	104.42%
FY2024-25	₹26,19,609 Cr	₹27,14,715 Cr	96.50%

Growth balance

Advances increased 131.24% overall versus 103.34% for deposits — a 27.90 percentage-point difference. The credit-deposit ratio exceeded 100% in FY2023-24 at 104.42% before declining to 96.50% in FY2024-25.

CASA: The CASA ratio declined from 48.20% in FY2021-22 to 34.80% in FY2024-25, a 13.40 percentage-point reduction. Absolute CASA increased in reported years, but total deposits grew faster.

PCR: 69.81%, 72.69%, 75.80%, 74.04% and 67.86% across the five years.

CAR: remained strong at 18.79%-19.60% throughout the period.

12. Asset Quality, Efficiency, Returns & Capital

Risk indicators and sustainability of balance-sheet expansion

Metric	FY2020-21	Peak / Mid	FY2024-25	Interpretation
GNPA	1.32%	1.12%	1.33%	Improved through FY2022-23, then increased.
Net NPA	0.40%	0.27%	0.43%	Similar pattern to GNPA.
NPA spread	0.92 pp	0.85 pp	0.90 pp	GNPA minus Net NPA.
PCR	69.81%	75.80%	67.86%	Peaked in FY2022-23, then declined.
NIM	4.10%	—	3.48%	Five-year margin moderation.
ROA	1.97%	2.07%	1.91%	Peak in FY2022-23.
ROE	—	17.39%	14.56%	Peak in FY2022-23, then moderated.
Cost-to-Income	36.30%	—	40.50%	Operating efficiency requires attention.
CAR	18.79%	—	19.60%	Strong and comparatively stable.

Integrated assessment

Asset quality improved through FY2022-23 and weakened afterward. Later-period margin, efficiency and return indicators also moderated, while capital strength remained comparatively stable.

NIM declined from 4.10% to 3.48%. ROA moved from 1.97% to a peak of 2.07% in FY2022-23 and then to 1.91% in FY2024-25. ROE similarly peaked at 17.39% and declined to 14.56%. Cost-to-Income increased from 36.30% to 40.50%.

13. Cash Flow Analysis

Operating, investing, financing and net cash movements

Year	Operating CF	Investing CF	Financing CF	Net CF
FY2020-21	₹42,476.45 Cr	₹-1,822.70 Cr	₹-7,321.35 Cr	₹33,332.40 Cr
FY2021-22	₹-11,959.57 Cr	₹-2,051.23 Cr	₹48,124.02 Cr	₹34,113.22 Cr
FY2022-23	₹20,813.70 Cr	₹-2,992.18 Cr	₹23,940.56 Cr	₹41,762.08 Cr
FY2023-24	₹19,069.34 Cr	₹16,600.42 Cr	₹-3,983.06 Cr	₹31,686.70 Cr
FY2024-25	₹1,27,241.84 Cr	₹-3,650.91 Cr	₹-1,02,477.54 Cr	₹21,113.39 Cr

Key cash-flow signal

Operating cash flow varied considerably, from negative ₹11,959.57 Cr in FY2021-22 to a five-year high of ₹1,27,241.84 Cr in FY2024-25. The FY2024-25 financing outflow of ₹1,02,477.54 Cr materially reduced the net cash-flow outcome.

Net cash flow remained positive in every year, reaching ₹41,762.08 Cr in FY2022-23 before declining to ₹21,113.39 Cr in FY2024-25.

Profit and operating cash flow did not move identically each year: FY2021-22 had positive net profit but negative OCF, while FY2024-25 had both strong net profit and exceptionally high OCF.

14. Ad-Hoc Business Analysis & Management Recommendations

Business question	Answer
Did advances grow faster than deposits?	Yes. Advances increased 131.24% versus 103.34% for deposits.
Which year had the highest net-profit growth?	FY2023-24, at 39.27%; the HDFC Ltd merger should be considered when interpreting scale.
Did asset quality change alongside credit growth?	Asset quality improved through FY2022-23 and then weakened. FY2023-24 advances rose 55.25% while GNPA moved from 1.12% to 1.24%; this does not establish causation.
What happened when NIM declined?	NIM declined from 4.10% to 3.48% while absolute net profit increased, so earnings growth and margin performance should be monitored separately.
Did other income grow faster than profit?	In FY2023-24, other income grew 266.67%, compared with 66.12% income growth and 39.27% net-profit growth.
How did CASA change?	CASA ratio declined 13.40 percentage points from FY2021-22 to FY2024-25.
Did capital keep pace with expansion?	CAR remained within 18.79%-19.60% while advances and deposits expanded substantially.
Does profit growth translate into OCF?	Not consistently. FY2021-22 had positive net profit but negative OCF; FY2024-25 had strong profit and strong OCF.

Priority actions

- Strengthen deposit mobilization alongside credit growth and monitor the credit-deposit ratio.
- Improve CASA contribution and deposit composition.
- Protect NIM while monitoring margin quality alongside absolute earnings.
- Maintain disciplined underwriting, portfolio monitoring, early-warning and recovery processes.
- Identify process, productivity and cost-management opportunities as Cost-to-Income rises.
- Monitor ROA and ROE alongside balance-sheet growth.
- Preserve capital buffers and align capital planning with credit growth and risk.
- Track operating, investing and financing cash flows together with profitability.

15. Limitations, KPI Definitions & Conclusion

Limitations & data considerations

- The working financial-statement dataset is consolidated, while several banking KPIs are standalone/banking-level.
- The HDFC Ltd merger effective July 1, 2023 affects comparability and business scale, particularly in FY2023-24.
- CASA values were unavailable for every year and were retained as NULL rather than treated as zero.
- The dataset is annual; monthly and quarterly movements are outside the current scope.
- The summarized dataset limits the ability to determine the exact operational cause of every movement.
- Banking cash-flow movements require context from balance-sheet and financing activities.
- The project does not provide investment advice, stock-price forecasting, customer-level analysis or ML-based prediction.

Selected KPI definitions

KPI	Definition
Net Profit Growth	$(\text{Current Year Profit} - \text{Previous Year Profit}) \div \text{Previous Year Profit} \times 100$
CAGR	$(\text{Ending Value} \div \text{Beginning Value})^{(1/n)} - 1$
Credit-Deposit Ratio	$\text{Total Advances} \div \text{Total Deposits} \times 100$
CASA Ratio	$\text{CASA Deposits} \div \text{Total Deposits} \times 100$
NPA Spread	$\text{GNPA Ratio} - \text{Net NPA Ratio}$
Net Profit Margin	$\text{Net Profit} \div \text{Sales} \times 100$
Cost-to-Income Ratio	Operating costs relative to operating income
CAR	Capital relative to risk-weighted assets under applicable regulatory requirements
Net Cash Flow	$\text{Operating Cash Flow} + \text{Investing Cash Flow} + \text{Financing Cash Flow}$
NULL	Unavailable value; not equivalent to zero

Conclusion

The five-year analysis provides a comprehensive management view of HDFC Bank's financial performance, business expansion, asset quality, efficiency, returns, capital strength and cash-flow movements. Net profit increased from ₹31,833.21 Cr to ₹70,792.25 Cr, while advances increased from approximately ₹11.33 lakh Cr to ₹26.20 lakh Cr and deposits from approximately ₹13.35 lakh Cr to ₹27.15 lakh Cr.

The key management challenge is to ensure that future growth remains sustainable and efficient: protect deposit quality and CASA, maintain asset quality, protect margins, improve efficiency, preserve capital strength and track cash generation alongside accounting profitability.

Final management takeaway

Strong expansion and profitability growth are clear strengths. The next phase should emphasize the quality, efficiency and resilience of that growth.
